

HP Custom Workflow Solutions

Apps for How Your Company Wants to Work

The Challenge

Generic scan and print software, while inexpensive and quick to deploy, invariably require workarounds.

Employees must navigate menus designed for general audiences, IT teams must manage incompatibilities between the off-the-shelf tools and enterprise platforms, and critical business rules – such as routing, access control and brand standards – must be enforced manually or not at all.

These limitations introduce inefficiency, error, and risk that compound over time.

The Solution

Businesses across every industry can turn to HP Custom Workflow Solutions to streamline operations, reduce overhead costs, and deliver a superior user experience for both employees and customers.

A purpose-built solution – designed around your company's specific workflows, business infrastructure, and compliance requirements – consistently outperforms generic, off-the-shelf software that forces organizations to adapt their processes to the tool rather than the other way around.

HP custom apps align precisely with how your business actually operates, eliminating the friction, workarounds, and inefficiencies that accompany one-size-fits-all alternatives. The result is a measurable return on investment through reduced waste, faster throughput, stronger security, and a scan/print environment that scales seamlessly alongside your business.

Aligning with How Your Business Operates

HP Custom Apps align with how your business operates, eliminating the friction, workarounds, and inefficiencies that accompany one-size-fits-all alternatives. The result is a measurable return on investment through reduced waste, faster throughput, stronger security, and a scan/print environment that scales alongside your business.

Custom App Benefits

- Reduce manual steps: Minimizes human error and speeds up document workflows.
- Seamless integration: Connects with existing ERP, CRM, inventory, and AI tools for smoother operations.
- Streamline repetitive tasks: Automates tasks like saving, scanning, and printing, reducing time and effort.
- Proactive issue reporting: Alerts users to printer issues or low toner, preventing workflow interruptions.
- Cost/Time savings: Reduces overhead and operational costs by optimizing print and scan processes.

Steps for Creating a Custom App

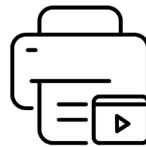

Assess

An HP advisor assesses the organization's digital and paper processes, as well as its objectives.

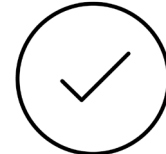

Plan and budget

The HP advisor creates a statement of requirements (SOR) with scope, deliverables, timeline, and budget.

Develop

The HP Custom Workflow Solutions team builds your custom UI, develops, and tests your custom app.

Deploy

HP deploys your app using HP cloud-based or network-based solutions compliant to your security policies.

Faster App Development

The HP Custom Workflow Solutions team will work closely with your organization stakeholders to develop, test, and verify an app that helps meet your unique business needs. Depending upon your requirements and complexity, development can range from a few weeks to several months.

Contact your local HP representative to discuss how HP can build your business a custom app or go to Reinvent.hp.com/Workpath.
